polylinker; Plasmid DNA from the normalized library
NCI_CGAP_GC4 was prepared, and ss circles were made in
vitro. Following HAP purification, this DNA was used as
tracer in a subtractive hybridization reaction. The driver
was PCR-amplified cDNAs from a pool of 5,000 clones made
from the same library (cloneIDs 1257095-1258031,
1469044-1470983, and 1475592-1476743). Subtraction by
Bento Soares and M. Fatima Bonaldo. "

polylinker; plasmid DNA from the normalized library
NCI_CGAP_GC4 was prepared, and ss circles were made in
vitro. Following HAP purification, this DNA was used as
tracer in a subtractive hybridization reaction. The driver
was PCR-amplified cDNAs from a pool of 5,000 clones made
from the same library (cloneIDs 1257096-1258651,
1469044-1470983, and 1475592-1476743). Subtraction by
Bento Soares and M. Fatima Bonaldo. "

             The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized AV canal at 16.5 dpc library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this cDNA sequence: 93-136,

Sequence 38, Application US/08850910A

Patent No. 5948761

PATECANT: SEILHAMER, J.J.

APPLICANT: LEWICKI, J.

APPLICANT: LEWICKI, J.

APPLICANT: CEARBOROUGH, R.M.

TITLE OF INVENTION: RECOMBINANT TECHNIQUES FOR

TITLE OF INVENTION: PRODUCTION OF BRAIN NATRIUETIC PEPTIDE

NUMBER OF SEQUENCES: 50

CORRESPONDENCE ADDRESS:

ADDRESSEE: MORRISON & FOERSTER, LLP

STREET: 2000 Pennsylvania Avenue, NW, Suite 5500

CITY: Washington

STATE: DC

COUNTRY: USA

        Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Contains the alternatively spliced CLONG gene for chloride chanel proteins CLC-6A (KIAA0046) -B. -C and -D, the alternatively spliced NPPA gene coding for Atrial Natriuretic Factor ANF precursor (Atrial Natriuretic peptide ANP, Prepronatioaliatin), the NPPB gene for Brain Natriuretic protein BNP, and a pseudogene similar to SBFI (and other Myotubularin-related protein genes). Contains ESTs,

(http://www.sanger.ac.uk/HGPC/hrl/) Sanger Centre, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquires: Connective the constant of clone 934617. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variations annotated may not be found in the sequence submission corresponding to the overlapping clone as we submit sequences with only a small overlap as described above. This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre chromosome 1 mapping group. Further information can be found at hitp://www.sanger.ac.uk/HGP/Chil/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key.

The true right end of clone 934G17 is at 107603.
934G17 is from the library RPCI5 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong.
